Labiaplasty - Labia Reduction Surgery

Labiaplasty is a surgical procedure to reduce, reshape and recontour the most intimate area of a woman's body.

Potential Risks and Complications

Modern surgery is generally safe but does have the potential for risks and complications to occur.

Some possible complications and risks associated with a labiaplasty may include:

- Excessive bleeding, pain and/or swelling, haematoma
- Asymmetry
- Unacceptable scarring
- Delayed wound healing
- Wound infection
- Over or under correction
- Change in sensation or numbness
- Some complications may require further surgery
- Risks or complications associated with anaesthesia (including drug reactions, toxicity or allergy, deep venous thrombosis and embolus, heart and lung complications)

Disclaimer: The above list is not exhaustive and other risks, complications, or outcomes may occur during or after your surgery. If you wish to discuss the potential risks and complications further, please do so at your patient consultation.
